Download the Up-to-Date List of All Machines Released by Car and Tyre Manufacturers. Automatic demounting and mounting of the tyre is started with a joystick. None the less the operator will never loose control of the operation. The intelligent controller ensures that exactly adjusted forces are applied on the tyre during every single step of the operation so that both tyre and rim are protected against damage. The Quadriga excels through its high level of ergonomics, universal use and accurate and controlled automated processes.
